

Ripple Fold Drapery  
Installation Instructions

REGAL DRAPES

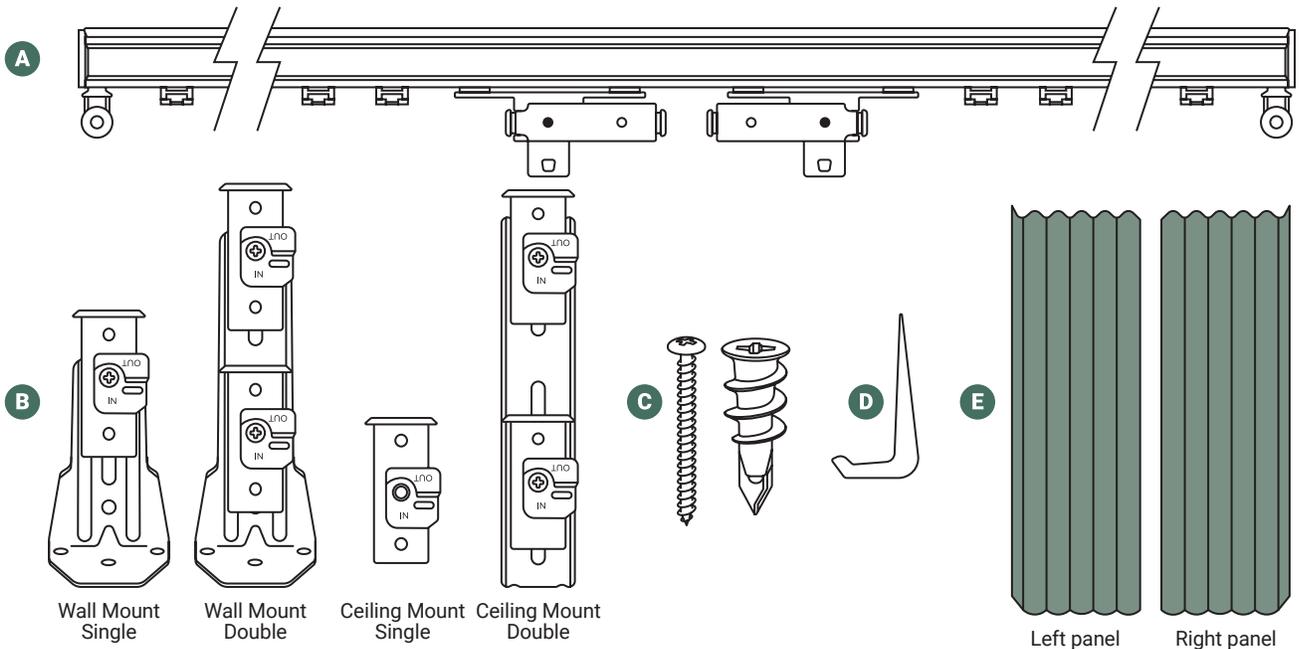

# Before You Begin

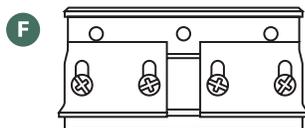

## Materials

Please read through all instructions carefully before you begin. Unpack all materials, making sure all parts are included:

- A** Track(s) pre-installed with master carrier(s) & carriers
- B** Mounting brackets
- C** Screws & anchors
- D** Tenter hooks
- E** Drapery panel(s) with pre-installed carrier pendants
- F** Splice, if required
- G** Wand(s), if purchased

### If Required

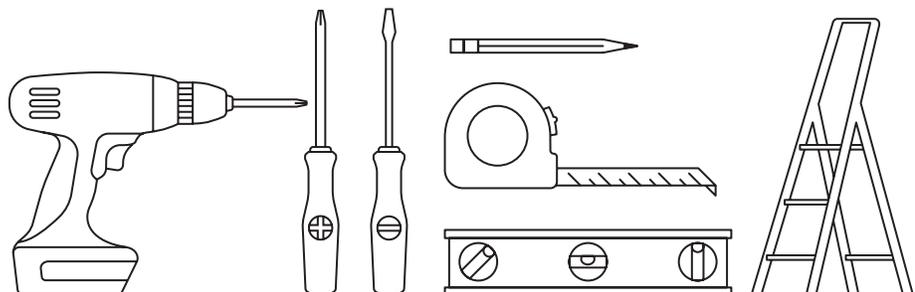

### If Purchased

## Tools You Will Need

- Drill with Phillips screwdriver bit
- Phillips screwdriver
- Standard screwdriver
- Pencil
- Metal tape measure
- Level (wall mount)
- Step ladder

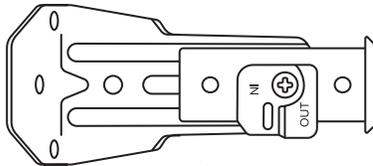

## Track Installation

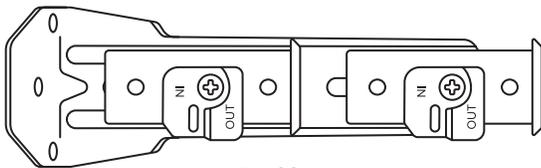

### Hardware Information

Ripple fold drapery track can be **wall mounted** or **ceiling mounted**. Specific brackets are used for each application.

#### Wall Mount Brackets

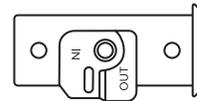

Single

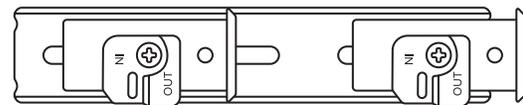

Double

#### Ceiling Mount Bracket

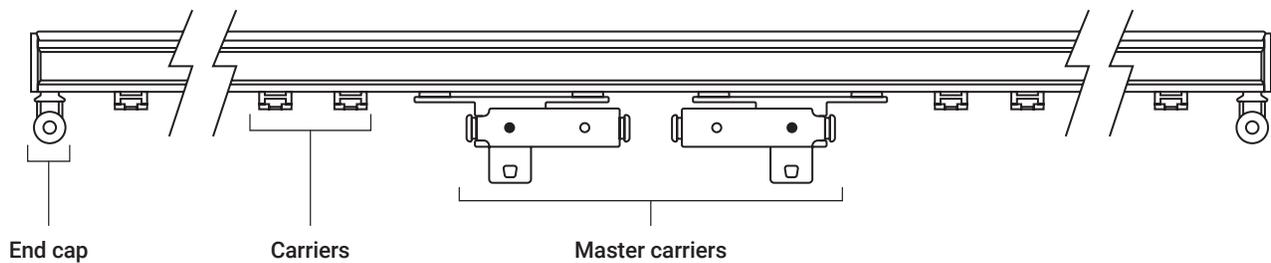

Single

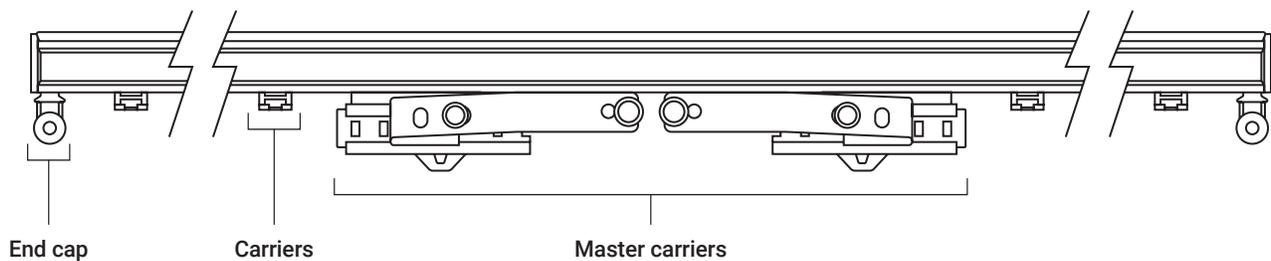

Double

The ripple fold track that we provide is pre-cut and pre-loaded with the appropriate carriers for each of the drapes that we have made for you. That track locks into the brackets discussed above. Carrier will have the opening facing into the room for connection.

#### Butt Master Carriers - front view

#### Overlap Master Carriers - front view

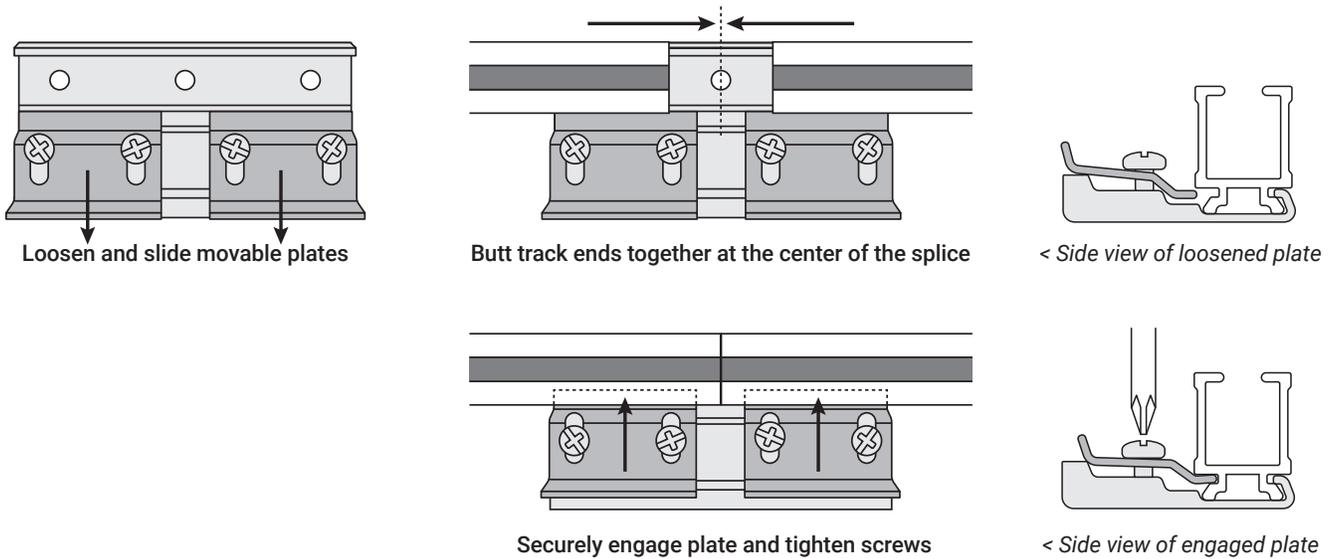

Wall Mount Instructions (Ceiling Mount Instructions on Page 5)

**Step 1 - Installing Splice (if required)**

Typically for tracks 96" or longer, tracks are shipped in multiple pieces and will require a splice. If splice is not required, proceed to Step 2 - Track Height.

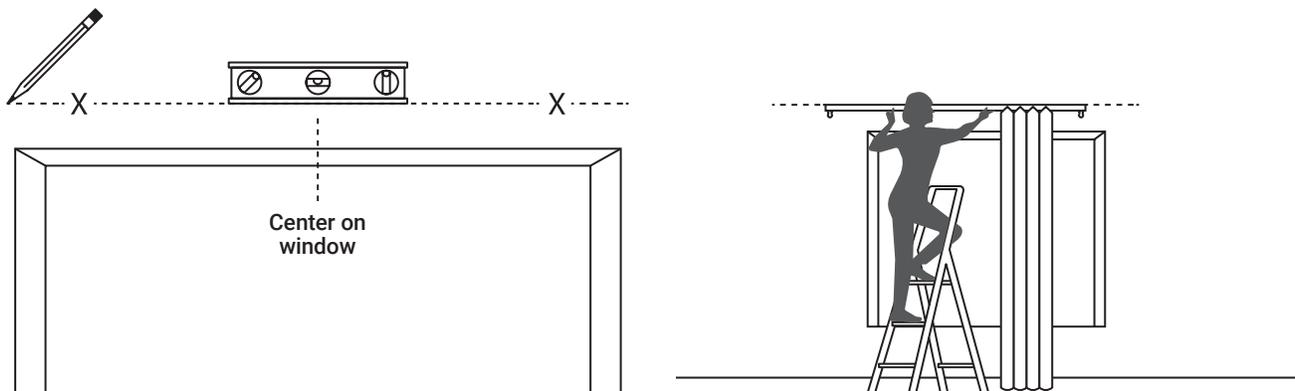

- Loosen locking screws and slide movable plates away from the channel. Slide the open end of each connecting track into the channel of the splice and butt ends together at the center. **Note:** once attached, the splice will protrude off the back of the track toward the wall.
- Slide movable plates toward the track and make sure the plates engage the track. Tighten locking screw with Phillips screwdriver for a secure fit.

**Step 2 - Track Height**

Most of the time we recommend centering on window/door. Determine the height of the top of the track and mark bracket height on the wall for all the brackets. Adjust as necessary to make sure they are all level and in a straight line. The recommended method to determine height is to add 1 1/2 inches to the length of your drapery panel. For example: if drapery panels are 84"L, the top of the track would be installed at 85 1/2" allowing a 1/4" clearance above the floor.

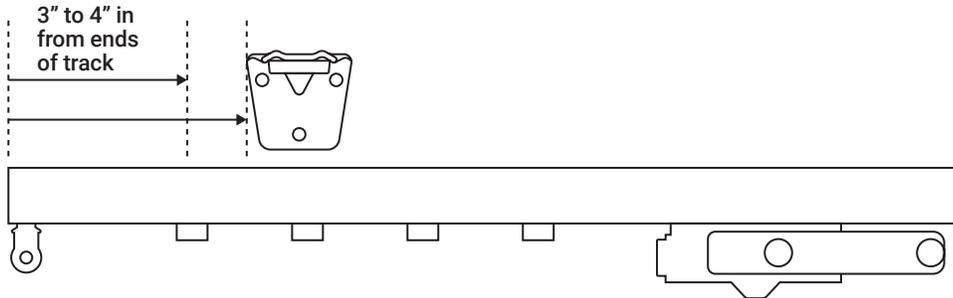

**HINT** When practical, another method to set the height of the track is to snap a few pendants in place on your track (see Drapery Panel Installation, Step 2 on page 7) and let your panel hang down to your desired height above the floor. This method works when the size of the panel is modest enough for you to hold the track and hang the panel above the floor.

**Step 3 - Bracket Placement**

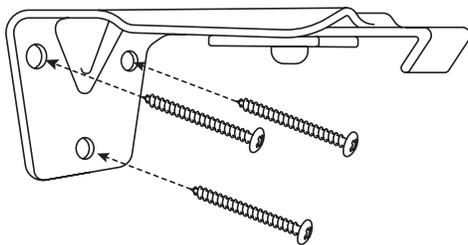

Measure the width of the track and mark the two end brackets approximately 3" - 4" in from the ends of the track. Evenly space the remaining brackets and place corresponding marks. We also recommend that you aim to mount as many brackets as possible into studs or window header. We strongly recommend that brackets be installed within every 16" - 24" of track to support your drapes. If you do not have enough brackets, call us at 1-800-256-5005. When studs are not located in the 16" - 24" spacing, the provided anchors **must be used** to install brackets for standard sheetrock. For other wall types, use appropriately rated anchors (not included). It is not critical that the brackets are spaced evenly. As they will be hidden by the drapes, the brackets can be spaced unevenly to catch a stud.

**HINT** To find wall studs, use a thin finish nail to tap through sheet rock or use a stud finder available from a hardware store.

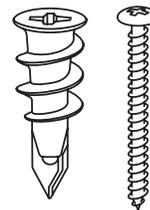

**Step 4 - Mount Brackets**

For wood frame header or wall stud locations, drive provided screws directly into wall. When studs are not located where bracket is installed, use Phillips bit to drive provided anchor into sheetrock and then screws into the anchors. The provided anchors **must be used** to install brackets for standard sheetrock. \*For other wall types, use appropriately rated anchors (not included).

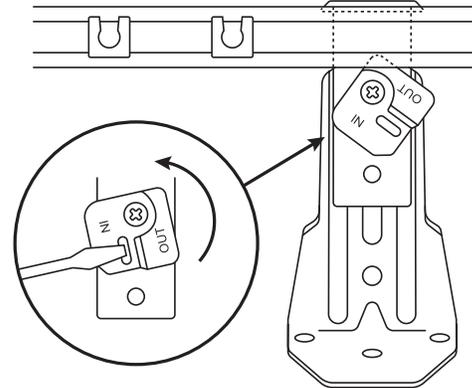

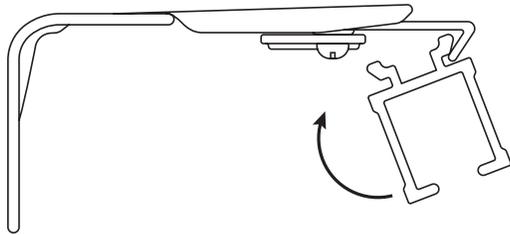

Use anchors when wall studs are not accessible\*

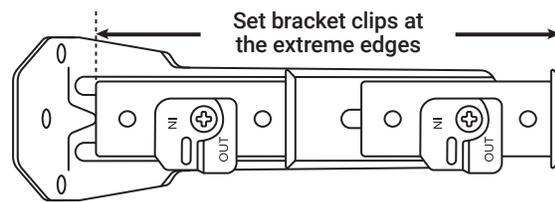

**Step 5 - Attach Track**

Loosen Phillips-head screw on bracket plates, but do not remove completely. Place the track into the brackets as shown in the drawing. Rotate the silver plate counterclockwise by inserting a standard screwdriver blade into the available slot. Rotate the plate as tight as possible (at least 45 degrees) counterclockwise to lock the track in place.

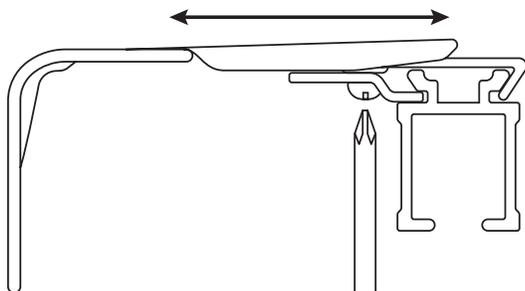

**DOUBLE BRACKET SPACING** Bracket clips should be set at the extreme edges (apart from each other) to allow the drapery to move independently without interference.

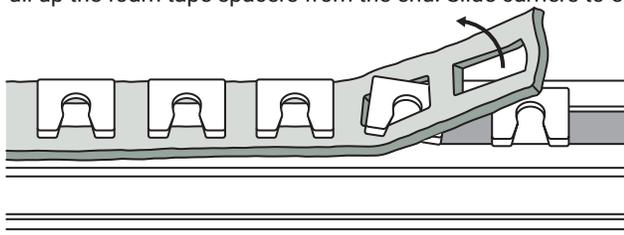

**Step 6 - Adjust Projection**

Adjust track to desired projection (distance from the wall). Projection is adjustable from 3" - 4 1/2". Repeat this step for the remaining brackets. Once the desired projection is set for all the brackets, lock the bracket into position by tightening the track depth adjustment set screw. All brackets need to be set at same projection.

**Step 7 - Remove Tape Spacers**

Pull up the foam tape spacers from the end. Slide carriers to ensure smooth operation before connecting the drapes.

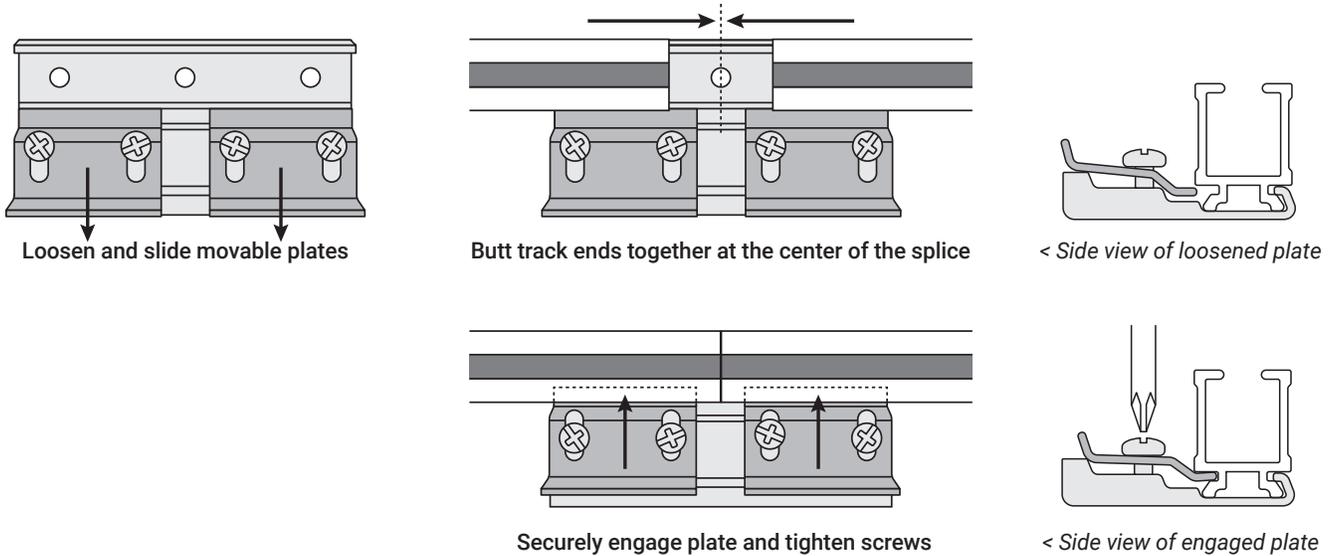

**PROCEED TO DRAPERY PANEL INSTALLATION ON PAGE 7**

## Ceiling Mount Instructions

### Step 1 - Installing Splice (if required - typically for tracks over 96")

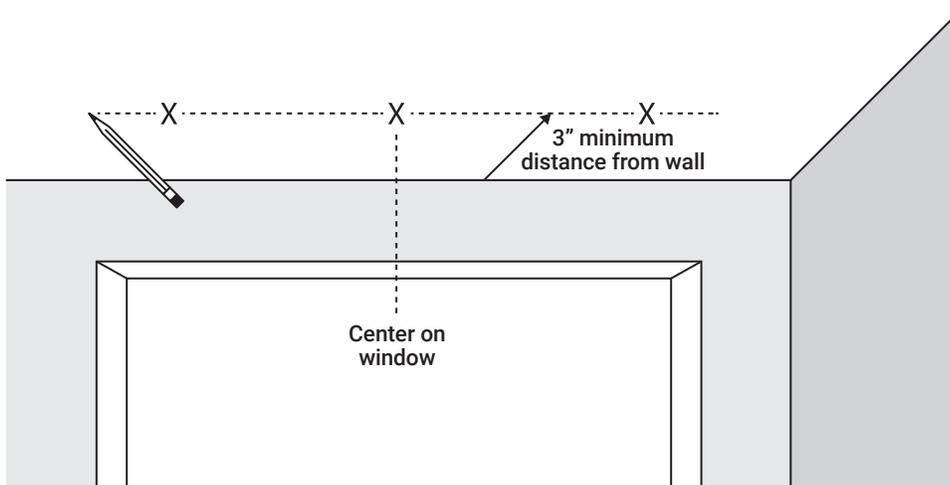

Typically for tracks 96" or longer, tracks are shipped in multiple pieces and will require a splice.

- Loosen locking screws and slide movable plates away from the channel. Slide the track of the connecting ends on each track into the channel of the splice and butt ends together at the center of the splice.
- Slide movable tracks toward the track and make sure the plates engage the track. Tighten locking screw with Phillips screwdriver for a secure fit.

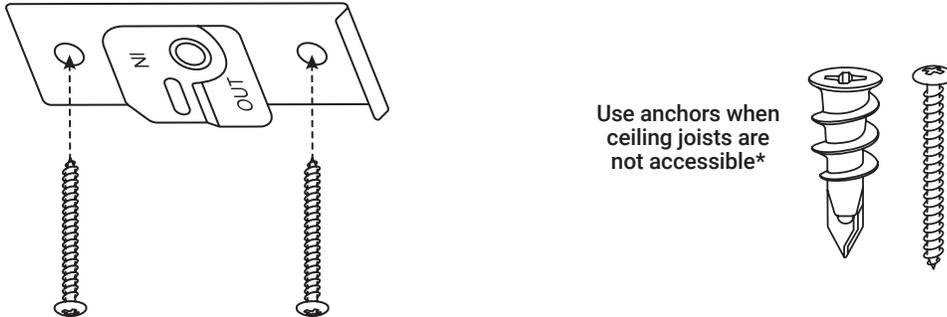

### Step 2 - Track Position

Most of the time we recommend centering on window/door. Measure the width of the track and mark the two end brackets approximately 3" - 4" in from the ends of the track, preferably on ceiling joists. Brackets should be a minimum of 3" from the wall. Evenly space the remaining brackets, preferably on ceiling joists, and place corresponding marks in a straight line.

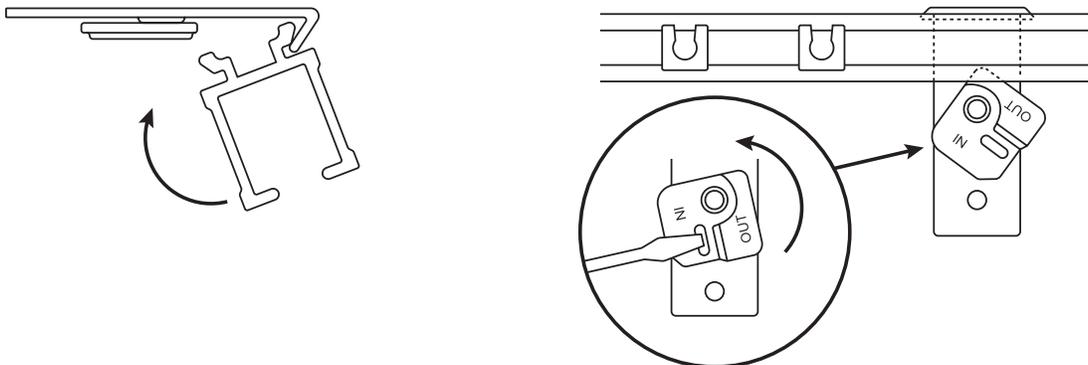

**Step 3 - Mount Brackets**

For ceiling joist locations, drive provided screws directly into ceiling. When ceiling joists are not located where bracket is installed, use Phillips bit to drive provided anchor into sheetrock and then screws into the anchors. The provided anchors **must be used** to install brackets for standard sheetrock. \*For other wall types, use appropriately rated anchors (not included).

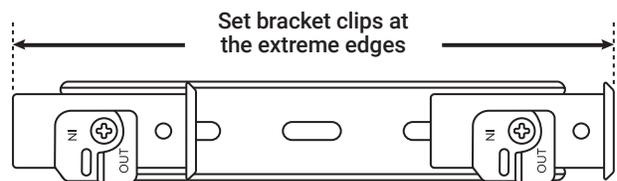

**Step 4 - Attach Track**

Place the track into the bracket as shown in the drawing. Rotate the silver plate counterclockwise by inserting a standard screwdriver blade into the available slot. Rotate the plate as tight as possible (at least 45 degrees) counterclockwise to lock the track in place.

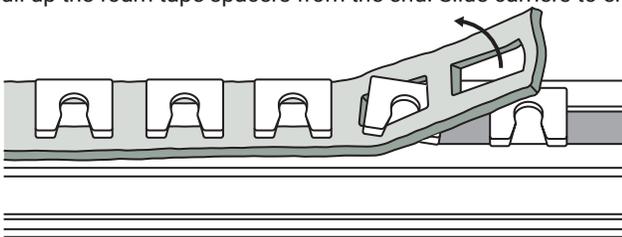

**DOUBLE BRACKET SPACING** Bracket clips should be set at the extreme edges (apart from each other) to allow the drapery to move independently without interference.

**Step 5 - Remove Tape Spacers**

Pull up the foam tape spacers from the end. Slide carriers to ensure smooth operation before connecting the drapes.

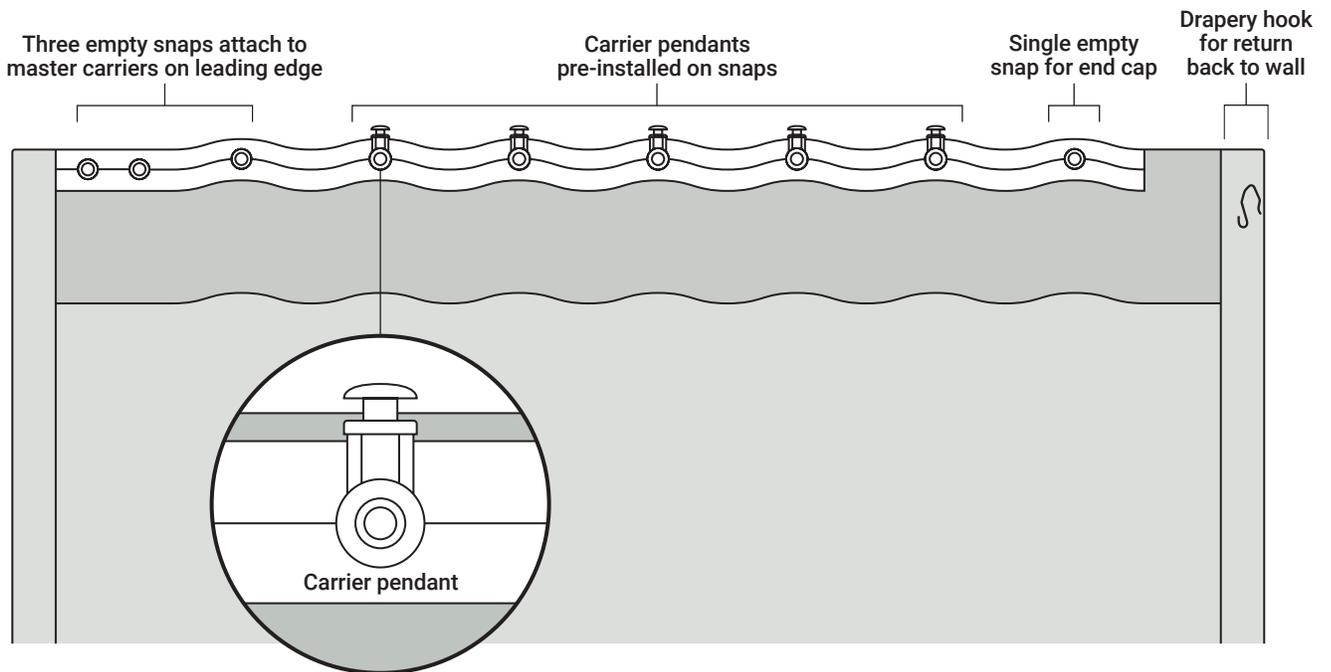

# Drapery Panel Installation

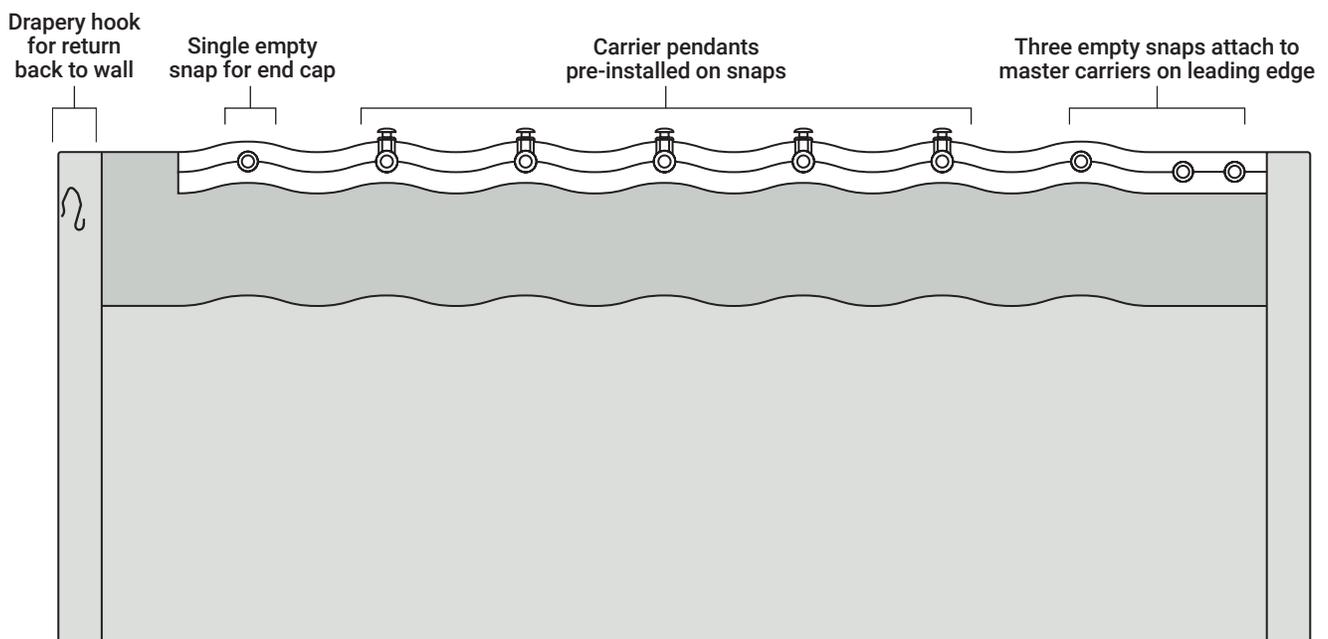

## Before You Begin

Familiarize yourself with the panels. Panels will be labeled left or right and will be configured as follows:

### Back of Left Panel

### Back of Right Panel

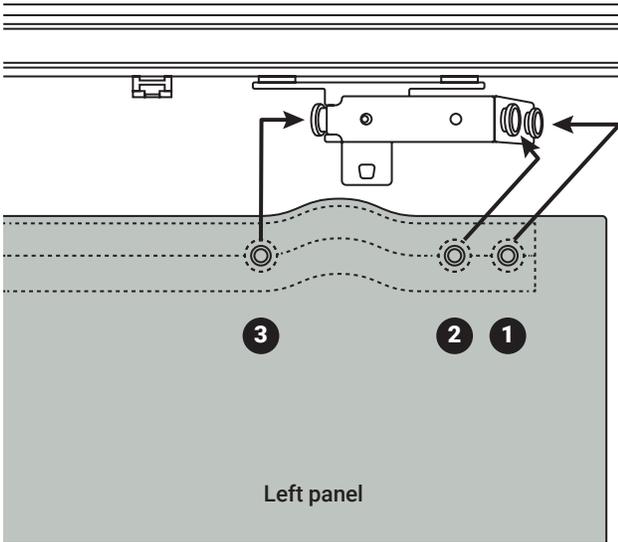

**Step 1 - Attach to Master Carriers**

Begin by snapping the first two buttons on the leading edge to the master carrier.

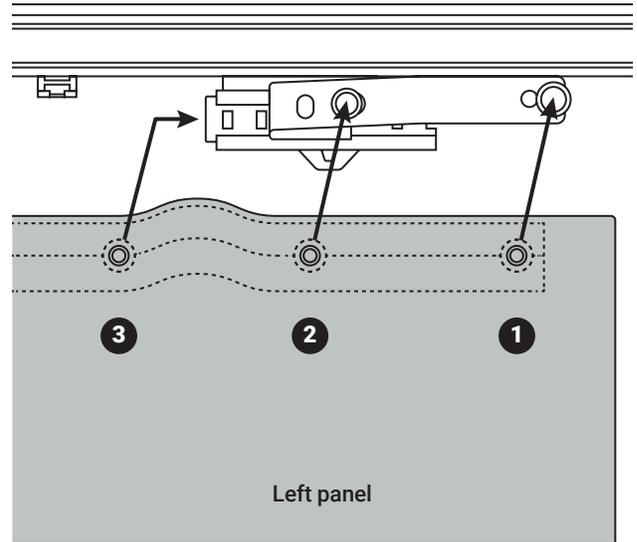

**Butt Master Carriers**

Typically used for most drapes. Snap the third snap into the snap on the side of the butt master carrier.

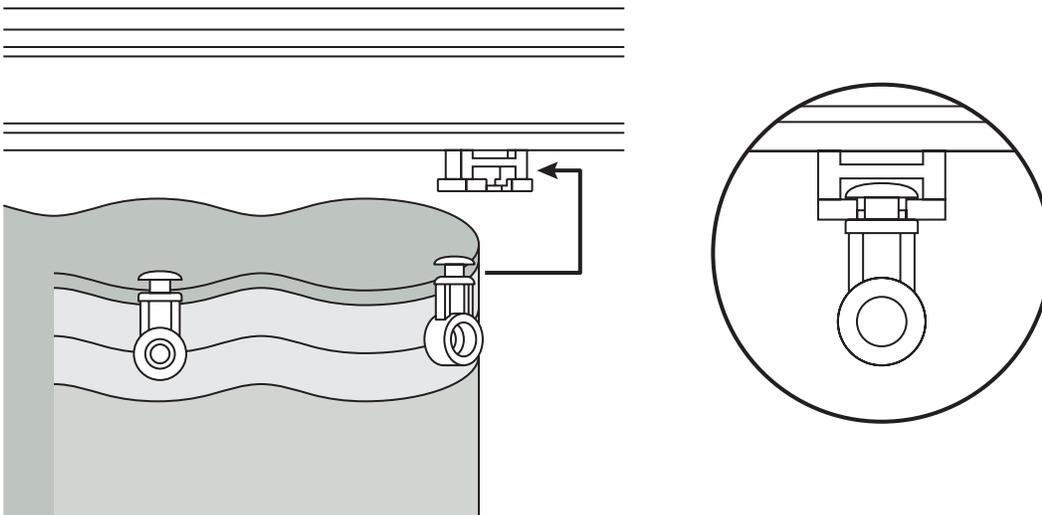

**Overlap Master Carriers**

Typically used for drapes with blackout linings. Snap the third snap into the plastic hole on the side of the master carrier.

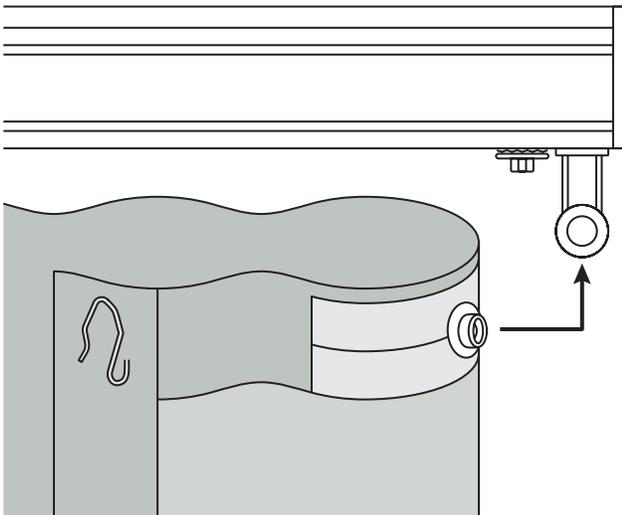

**Step 2 - Attach Pre-snapped Pendants**

Insert the remaining pre-snapped pendants onto the carriers. Should hear them click into place.

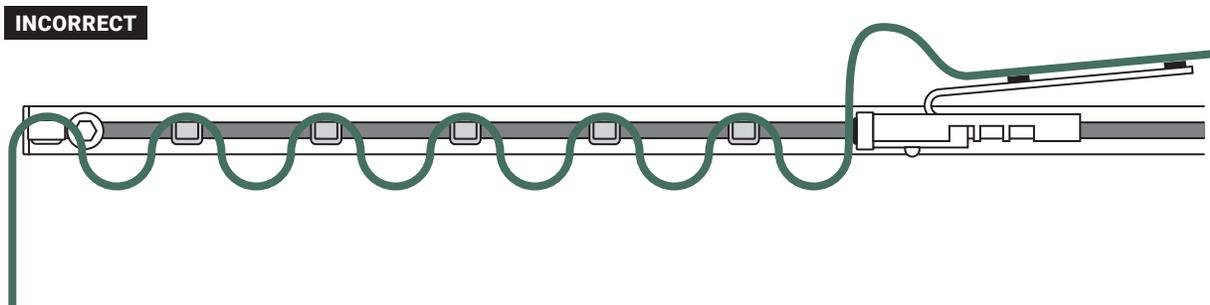

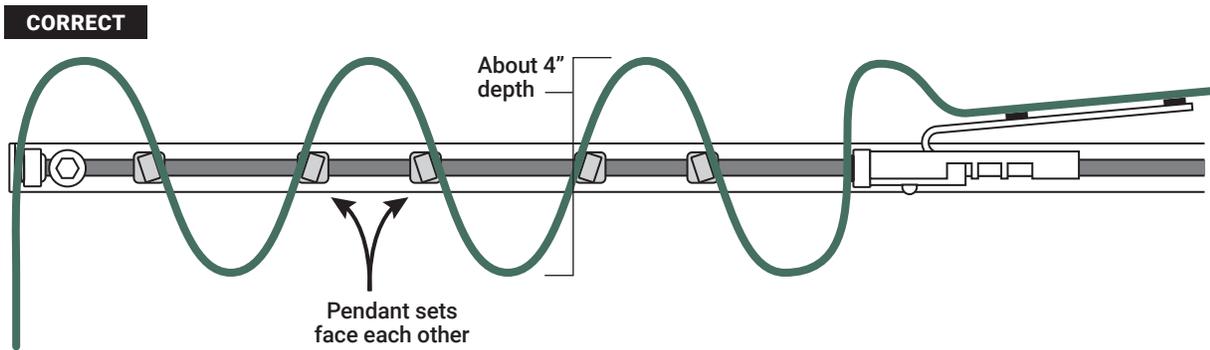

**Step 3 - Snap to End Cap**

Install the last snap onto the stationary carrier in the end cap.

**Step 4 - Dressing the Folds**

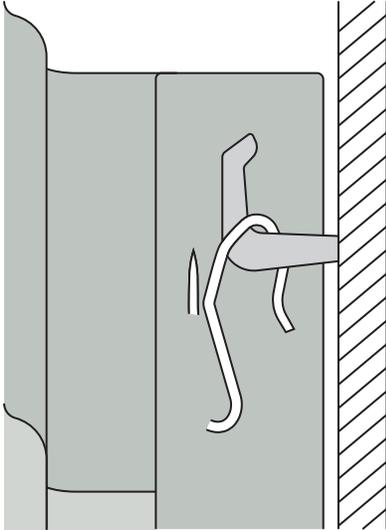

Once all pendants are installed, gather the drapery by creating S-like folds. Start from the main carrier and work toward the other end. Dress the fabric into S folds by pushing towards wall and pulling out into room. Each set of two pendants should face each other. Each "S" should take up about 4".

**Step 5 - Connect Drapery Return to Wall**

---

Affix the tenter hook to the wall, and attach the pre-installed drapery hook to the tenter hook to create a return. This will return the drape to the wall, concealing any side-light view. Drapery pin can be adjusted to desired return height.

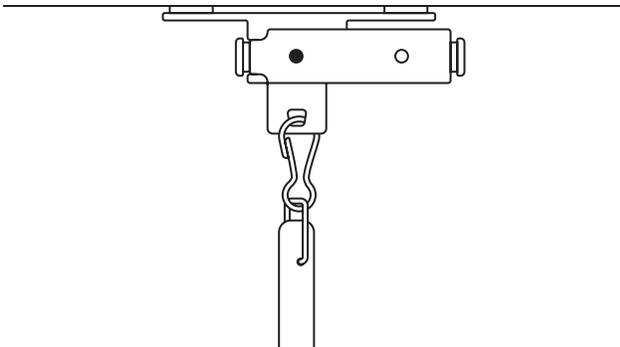

**Step 6 - Attach Wand(s)**

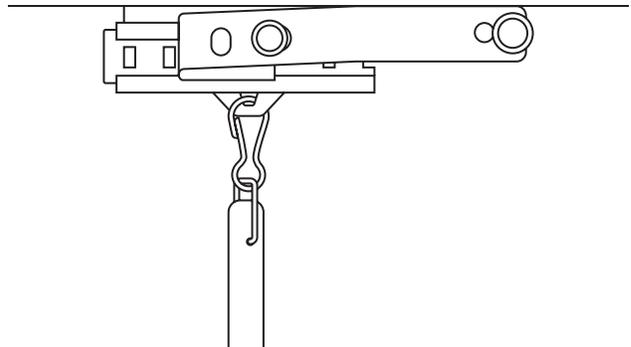

---

Attach the wand (if purchased with your drapes) to the master carrier. Simply fit the metal hook on the wand through the slot in the carrier below the snaps.

**Butt Master Carriers**

**Overlap Master Carriers**

## Drapery Care

---

Pardon my wrinkles, I've been through a long trip. Most of my wrinkles can be shaken out and will release after I've been hanging for a week or two.

If you wish, you can iron the drapes with a light steam setting on an ironing board. Be sure to place a barrier fabric over the drapes. Do not iron directly. Remember, use light steam and keep the iron moving.

Or, use a steamer unit when the drapes are hung. Reasonably priced steamer units are available at Amazon, Wal-Mart, Target, etc. Certain fabrics like silks or linens have natural characteristics that steaming won't remove.

Drapes are Dry Clean Only. You may also clean our drapes or roman shades with a vacuum attachment (covered with nylon or cheesecloth).

## Questions? Comments?

---

Our dedicated customer service team is available to answer any questions you may have about your drapery or installation. Contact us at 1-800-256-5005 or email [customercare@regaldrapes.com](mailto:customercare@regaldrapes.com).
